

Above the Fold Improvements

Conveyor | Q1 2026 Initiative

Here is the result of "view" for the Page with URL <https://www.notion.so/2d2bc34a95a1805daf94c02af6f6307f> as of 2026-03-17T16:00:09.658Z:

<<>>Primary problem we are focused on this quarter (<mention-page url="https://www.notion.so/2cdbc34a95a180908e15fb77b31e7c03"/>)<<<EB>>>

Trust Center Visitors today (across all Trust Center platforms) cannot quickly determine whether a vendor meets their requirements <<<I>>>with sufficient confidence and evidence <<<EI>>>resulting in follow up and additional effort.

■ Background

As part of supporting our North Star goal of enabling Trust Center Visitors to <<>>confidently and effectively complete their security reviews without support<<<EB>>> we are dedicating time this quarter to make immediate, incremental improvements to the first impression that a user has when they visit a Conveyor Trust Center.

While as a whole the industry has accepted and adopted the Trust Center as a method for improving customer and prospect self-serve and reducing the workload of Trust and Security teams, many organizations still find themselves bogged down by questionnaires that could be answered based on the shared content, requests to share documents directly, and hesitation by internal teams to direct their customers to the Trust Center as their first path towards getting support.

For this self-service to be successful, users need to:

- Understand how to access and utilize the Trust Center
- Feel confident in the page contents being accurate, current, and relevant
- Understand what content is available to them
- Understand how to find what they are looking for
- Understand where to go if they need additional help

We have also heard a lot of feedback from our Trust Center admins that they want more control over the page layout and look and feel so that they can provide their users with a better experience. While we want to enable our customers to have the tools that they need to provide a quality Trust Center, we also want to make sure that our foundational offering (prior to major customization) is functional and efficient.

To measure our current state and to give us a way to track improvements going forward, the following statement was devised:

<<>>I can get what I need quickly and without friction from a Conveyor Trust Center.<<<EB>>>

In preparation for this project we undertook:

- Competitive research and review of Safebase, Vanta, etc Trust Centers
- Brainstorming as a squad about what is working well and what is not working well within our Trust Center (as well as what these competitors do well)
- Analysis & bucketing of customer Trust Center feedback
- Collection of a baseline value for user agreement with our success statement

A brief callout of overarching topics that we determined should be addressed (either through this project or through our broader vision work & TC improvements):

- Low information density / very long page to scroll through
- Unclear action items: user confusion over NDA signing, requesting and regaining access
- Lack of best practice guidance for customers on Trust Center design for the best visitor experience.

■ <<>>Project goals / scope overview<<<EB>>>

In this phase of work, we plan to address only what we are calling “above the fold” so information that would be present to a customer as soon as they load a Trust Center page. For design and research purposes we are defining this as 1440 pixels wide by 800 pixels tall as an average, safe baseline to aim for when improving our information density / look and feel. We are <<>>not<<<EB>>> undertaking a full redesign/reimagining of the Trust Center in this phase. (Vision work planned and progress in this broader space under consideration for Q2 2026)

<<>>In this phase, we are optimizing clarity and density - not redesigning navigation architecture or underlying Trust Center capabilities.<<<EB>>>

1440 x 800:

1440 x 1024:

From this project, we aim to increase Trust Center visitors' agreement with the statement that they can quickly and easily get what they need without friction. In turn, we expect that improving this sentiment will lead to an increase in touchless reviews per customer (as customers feel more successful/confident with self-service) and a decrease in one-off requests for documents.

■ Core hypothesis

Our belief is that by improving the above-the-fold experience for customers we will:

- Increase user clarity and confidence in the first 30 seconds of arrival
- Reduce confusion around access, NDA signing, and document retrieval.
- Improve perceived trustworthiness and currency of content.
- Increase likelihood that visitors attempt self-service before reaching out

We will know that this is true if:

- Agreement with our success statement increases by X%

■ Risks

- Increasing information density reduces clarity of understanding.
- Above-the-fold changes create inconsistency with the rest of the page.
- Perceived improvement in survey does not correlate with reduced real-world follow ups.
- Customer customization requests continue or are increased through this project.

Linear Project Page

<<>>Figma Hub<<<EB>>>

■ Metrics

A successful launch of these above the fold improvements will aim to:

- Increase customer agreement with the statement <<>>I can get what I need quickly and without friction from a Conveyor Trust Center. <<<EB>>>Based on:
- Async Maze study (baseline vs post-launch)

- In-app or post visit email surveys (after launch of)
- Follow up TPRM interviews
- Be implemented for customers directly without major incidents or impacts
- Improve prospect reception of / perception of our Trust Center capability

Leading indicators to track:

- Synthetic testing task completion rate (above the fold tasks)
- Time-to-first-action
- Reduction in clarification questions related to:
- Requesting access
- NDA
- How to get started

Lagging indicators:

- Reduction in one-off document requests
- Increase in touchless reviews per customer

■ Scope

➔■ <<>>Out of scope<<<EB>>>

- Redesign of the entire Trust Center experience (full-page IA etc)
- Not aiming to entirely eliminate customer questionnaires at this phase
- Not solving for deep document organization
- Changes that will completely overhaul the whole experience beyond just the above the fold capabilities
- Changes introduced in the Agent will be maintained and extended into this project - but Agent adoption is <<<I>>>not<<<EI>>> required for using the new layout

<<>>■ ■ Decision log<<<EB>>>

3/2

Reducing scope

3/10

Stack ranking of scope so that we contain the work for this project within Q1 as much as possible. Stack rank is as follows: • Search • New header (including user menu) • New layout Lower priority moving to nice to have - possibly cut: • Pinned announcements • Table of contents navigation • Docs/Badges/Updated badges

3/10

Cutting the following from this project: • Recently updated change log • Onboarding/welcome modal • Product selection modal

3/12

In the search bar, we are not going to add download buttons next to the document names. When the user clicks on a document, we will take whatever action we are able to take (either preview or download)

<<<I>>>Note, these will be moved into the feature table below once we have designs further along and a set scope<<<EI>>>

- Introduce top header bar to all TCs
- Remove “you’ve been approved” section - change to a popup potentially on user first visit

- Move custom documents list into user menu
- ~~Separate our philosophy and coming soon sections~~
- Add custom settings
- ~~Introduce two columns to the page~~
- ~~Let people move sections within and between these columns~~
- Add a table of contents style nav
- Download all button for documents (or maybe just featured documents)
- Search bar?

Ranking

1

■ Must have

Preview links

2

■ Must have

Internal ability to roll back changes / roll back a single customer

3

■ Must have

Improved global search

4

■ Must have

Updated header bar for all Trust Centers

5

■ Must have

Move custom documents section to new user menu within header

New user menu

6

■ Must have

New layout

7

■ Nice to have

Docs / Certs / Updated date badges

8

■ Nice to have

■ Launch plan

Approach (draft)

This project impacts our customers' customers so we must ensure quality and consideration for the user experience and change management with this launch:

- Changes must be incremental and non-disruptive
- Customers should not be required to redesign their Trust Centers
- We should avoid frequent layout shifts in favor of bundling changes

Additionally, we want to reduce technical debt and overhead resulting from this project so we do not want to maintain two versions of the Trust Center or end up with older customers stuck not adopting this version. (Especially considering that we have broader changes planned for the near future.)

<<>>Proposed approach:<<<EB>>>

- Internal synthetic validation
- Limited customer preview
- Rollout to all Trust Centers
- Post-launch sentiment measurement
