<<>>Focus:<<<EB>>> Full product comparison for roadmap prioritization

<<>>Date:<<<EB>>> March 2026 · Conveyor Confidential

Executive Summary

The Trust Center market is in an active period of consolidation and AI-driven reinvention. SafeBase — historically the dominant standalone Trust Center vendor — was acquired by Drata in 2025, effectively bundling the category's strongest brand into a compliance platform. Vanta has declared an ambitious "Agentic Trust Platform" strategy with significant AI investment. Wolfia, a lean YC-backed startup, is gaining traction with an AI-first, unlimited-user pricing model. OneTrust remains a tangential enterprise GRC player rather than a direct Trust Center competitor.

For Conveyor, this landscape creates a meaningful strategic window. As the only independent, AI-native Trust Center focused exclusively on buyer-facing security review workflows, Conveyor can own the positioning that SafeBase pioneered but can no longer credibly hold as a Drata subsidiary.

<<>>Key findings:<<<EB>>>

- SafeBase's acquisition by Drata is a strategic gift — their best enterprise customers now have a vendor conflict of interest as SafeBase's roadmap gets subordinated to Drata's compliance priorities.
- AI is now table stakes. The new battlegrounds are UX, accuracy, citation transparency, and time-to-value — not whether AI exists.
- Vanta is winning on brand and ecosystem bundling, not on Trust Center depth. Their \$6k+ add-on pricing on top of a \$10–80k base platform creates clear room for Conveyor at the mid-market.
- Wolfia's unlimited-user pricing is a potential disruptive wedge, especially for companies with distributed security review workloads.
- No competitor has fully nailed the buyer experience. Most optimize for the security team's workflow, not the prospect's journey — this is Conveyor's clearest differentiation opportunity.

Market Overview & Competitor Snapshot

Trust Centers have evolved from static "security pages" into dynamic, AI-powered portals that automate security review workflows end-to-end. The core value proposition is reducing deal cycle friction: buyers get immediate, self-serve access to security documentation, and vendors avoid the manual back-and-forth of questionnaire responses.

The market is now segmenting along two axes: <<>>standalone vs. bundled<<<EB>>> (with compliance platforms), and <<>>depth-of-Trust-Center vs. breadth-of-GRC<<<EB>>>. Conveyor sits in the standalone,

Trust-Center-depth quadrant — a position that becomes more differentiated as compliance platforms absorb their Trust Center offerings into larger suites.

AI agent for questionnaires & Trust Centers; unlimited-user pricing

Undisclosed flat fee

Early/growing — 5-person team, YC S22

Competitor Profiles

SafeBase / Drata

SafeBase was the pioneer of the modern Trust Center category — purpose-built for buyer-facing security portals with granular access controls, branded Trust Center pages, and analytics tied to pipeline impact. In 2025, SafeBase was acquired by Drata, a compliance automation platform with 7,500+ customers. SafeBase now powers Drata's Trust Center product and continues to operate under its own brand, but its roadmap is increasingly integrated with Drata's broader compliance suite.

<<>>Core Capabilities<<<EB>>>

- Buyer-facing Trust Center portal with custom branding, custom domain, and gated/public content toggling
- Multi-product Trust Center profiles — multiple trust centers under one account for different product lines
- AI Questionnaire Assistance with 3rd-party portal support (OneTrust, Zip, etc.)
- Real-time analytics dashboards — document views, access requests, CRM-linked pipeline correlation
- NDA automation and CRM integrations (Salesforce, HubSpot, DocuSign, Ironclad)
- SCIM/SAML access controls with full audit history; open API and webhooks
- AWS Marketplace integration — Trust Centers embedded directly in AWS product listings (June 2025)
- AI Search for Trust Center — natural language queries across docs, KB entries, and updates
- Chrome Extension (beta) for browser-based questionnaire sidekick workflow

<<>>G2 Rating:<<<EB>>> 4.7/5 — Leader in Vendor Security & Privacy Assessment; #3 in Ease of Setup.

<<>>Key Customer Complaints:<<<EB>>> Limited integrations with external cyber-rating platforms; slow feature request process; gated access can be rigid without manual approvals.

■ ■ <<>>Strategic Watch:<<<EB>>> SafeBase's acquisition by Drata means the category's original champion is no longer a neutral party. Customers who want a best-in-class standalone Trust Center without compliance automation are now underserved. This is Conveyor's most actionable competitive opportunity in 2026.

Vanta

Vanta is the dominant compliance automation platform with 10,000+ customers and strong brand recognition among security and GRC teams. Trust Center is a paid add-on (~\$6k/yr) to their core compliance product. In November 2025, Vanta announced the "Agentic Trust Platform," positioning itself as the end-to-end solution for compliance, risk, security reviews, and trust communication. Vanta's Trust Center benefits from deep integration with their compliance data but is sold as an extension of a compliance platform, not a standalone product.

<<>>Core Capabilities<<<EB>>>

- Public-facing Trust Center showing compliance posture, controls, certifications, and documents
- AI questionnaire automation — 80%+ auto-response rate, 95% acceptance rate, 81% faster completion (May 2025: expanded to web portals, DOCX, and PDF)
- Vanta Exchange — direct collaboration portal for vendor security reviews with progress tracking (April 2025)
- Customer Commitments — tracks promises made to customers, maps them to controls, surfaces them in the Trust Center (unique feature with no known competitor equivalent)
- AI Agent 2.0 — 24/7 GRC engineer with complete program awareness; saves customers avg. 4 hrs/week
- NDA automation, watermarking, custom domains, and granular access controls

<<>>Pricing:<<<EB>>> Core plan \$10k/yr; Growth \$30–80k/yr; Trust Center add-on ~\$6k/yr. Median customer spend ~\$19.8k/yr (negotiated).

<<>>G2 Rating:<<<EB>>> 4.6/5 with 500+ reviews. Strong marks for automation and ease of compliance.

<<>>Key Customer Complaints:<<<EB>>> Expensive for SMBs; questionnaire caps trigger plan upgrades at renewal; limited Trust Center customization and reporting; sync issues with complex setups.

■ ■ <<>>Strategic Watch:<<<EB>>> For customers primarily seeking a Trust Center, Vanta can feel like buying a bulldozer to drive a nail. Their Trust Center add-on pricing on top of an already expensive compliance platform creates significant room for Conveyor at the mid-market.

OneTrust

OneTrust is a large-scale GRC and privacy platform serving 12,000+ customers including half the Fortune Global 500. Trust Center functionality is embedded in their broader platform — it is not a standalone product. OneTrust competes tangentially through their Vendorpedia Questionnaire Response Automation (QRA) and Third-Party Risk Exchange. Their primary positioning is enterprise-scale GRC, not the buyer-facing trust portal experience that defines Conveyor's category.

<<>>Core Capabilities<<<EB>>>

- Vendorpedia QRA — AI-powered automation for incoming security, privacy, and due diligence questionnaires; Spring 2025 update adds AI-powered response generation from documentation
- Third-Party Risk Exchange — access to pre-completed industry-standard vendor risk assessments
- Dynamic assessments with conditional logic for right-sized questionnaires
- Broad GRC platform: Privacy Automation, Third-Party Management, Tech Risk & Compliance, AI Governance, ESG

<<>>Pricing:<<<EB>>> All custom; typical customers spend ~\\$11.5k/yr; enterprise contracts significantly higher. No standalone Trust Center product.

■ <<>>Strategic Watch:<<<EB>>> OneTrust is not a direct Trust Center competitor for Conveyor's core ICP. Risk of overlap is low-to-moderate and primarily arises in large enterprise deals where a GRC committee is involved.

Wolfia

Wolfia is an AI-first security review automation startup (YC S22) with ~5 employees and ~\$500k in seed funding. Despite its early stage, Wolfia has generated impressive case studies: Amplitude processed 4x questionnaire volume and saved an estimated ~\$200k in annual labor; Juicebox closed deals 5x faster. Wolfia differentiates on three axes: unlimited-user pricing, citation transparency (every AI answer cites its source), and a Slack-first workflow.

<<>>Core Capabilities<<<EB>>>

- Security Questionnaire AI Agent — auto-fills Excel, PDF, Word, and web portal questionnaires (OneTrust, Zip, etc.)
- Trust Center — buyer-facing portal with 30-minute setup, sourced directly from internal documentation
- Citation transparency — every AI-generated answer cites its source document
- Unlimited users — no per-user or per-access fees; single flat subscription
- Slack-first experience — notifications, reviews, and approvals natively in Slack
- One knowledge base powering both questionnaire responses and Trust Center for consistency

<<>>Pricing:<<<EB>>> Undisclosed flat subscription with unlimited users and no per-access fees.

■ ■ <<>>Strategic Watch:<<<EB>>> Wolfia is a sleeper threat. Small team, early stage, but AI-native architecture and compelling unit economics could allow rapid growth. A Series A announcement should trigger a competitive response on pricing model.

Positioning Analysis

Vendor

Category Claim

Target Buyer

Key Differentiator

Conveyor

AI-native Trust Center & security review automation

B2B SaaS security / GRC teams, 50–5000 employees

Trust Center Agent — first AI agent embedded in a TC; answers buyer questions in-portal, fills questionnaires, cites sources

SafeBase / Drata

The Trust Center platform for modern security teams

B2B SaaS security teams; increasingly Drata compliance customers

Pioneer brand equity + deepest analytics + backed by Drata compliance data and customer base

Vanta

Agentic Trust Platform — unified compliance, risk, and security reviews

GRC/security teams at growth-stage to enterprise seeking compliance automation

End-to-end compliance platform with TC as part of a broader trust OS; Customer Commitments feature

OneTrust

Enterprise GRC — privacy, security, risk, and ESG in one platform

Enterprise / Fortune 500 GRC, compliance, and legal teams

Greatest breadth across all GRC domains; Fortune 500 presence and regulatory expertise

Wolfia

AI agent for questionnaires, RFPs, and Trust Centers

B2B SaaS security, legal, and sales teams with high questionnaire volume

Unlimited users, 30-min setup, citation transparency on every answer, Slack-first workflow

Strengths & Weaknesses

SafeBase / Drata

<<>>■ Strengths<<<EB>>>

- Category pioneer — first mover in branded, buyer-facing Trust Centers; strong G2 presence and word of mouth
- Deepest analytics in the category — pipeline impact dashboards linking TC activity to revenue are a meaningful moat
- Multi-product Trust Center profiles — unique feature for companies with complex product lines, no direct equivalent
- Broadest integration ecosystem (Salesforce, HubSpot, Jira, DocuSign, Ironclad, Slack, Teams, AWS Marketplace)
- Backed by Drata's compliance data — automatic pull of controls, certifications, policies for TC population

<<>>■ Weaknesses<<<EB>>>

- Acquisition lock-in risk — SafeBase's standalone roadmap is now subordinated to Drata's compliance priorities
- Full feature set requires Drata compliance platform subscription — no true standalone offering at full capability
- G2 feedback: rigid gated access controls; limited integrations with external cyber-rating platforms; feature velocity slowing
- Trust Center Essential (bundled entry tier) is significantly stripped down; power features require upsell

Vanta

<<>>■ Strengths<<<EB>>>

- Dominant brand in compliance automation — Trust Center benefits from Vanta's marketing flywheel and enterprise sales motion
- Deep compliance integration — controls, policies, and certifications from Vanta auto-populate the TC in real time
- Cohesive AI roadmap — AI Agent 2.0, Questionnaire Automation, and Vanta Exchange form a clear, well-funded capability arc
- Customer Commitments is a unique moat — no competitor tracks what's been promised to customers and maps to controls

<<>>■ Weaknesses<<<EB>>>

- Trust Center is an add-on to an already expensive compliance platform (\$10–80k base + ~\$6k Trust Center)
- Trust Center depth is secondary to compliance automation — buyers seeking TC-first products consistently feel underserved
- Pricing surprises at renewal (questionnaire caps, vendor thresholds) are a consistent G2 complaint

- Not viable as a standalone TC product; limited customization and reporting

OneTrust

<<>>■ Strengths<<<EB>>>

- Massive enterprise footprint — 12,000+ customers including half the Fortune Global 500
- Broadest GRC coverage — privacy, security, risk, ESG, AI governance all under one contract
- Vendorpedia pre-completed assessment library reduces questionnaire response effort for both parties

<<>>■ Weaknesses<<<EB>>>

- Not a purpose-built Trust Center — minimal buyer-facing portal functionality
- Complex, expensive, and poor time-to-value; implementations often take months
- Overkill for growth-stage SaaS; rarely appears in competitive deals at Conveyor's ICP

Wolfia

<<>>■ Strengths<<<EB>>>

- Unlimited-user pricing model is genuinely disruptive — eliminates per-seat friction for distributed teams
- Citation transparency is a meaningful trust builder in an era of AI hallucination anxiety
- Compelling case studies: \ \$200k labor savings at Amplitude (4x questionnaire volume); 5x faster deal close at Juicebox
- 30-minute Trust Center setup — fastest time-to-value claim in the category
- Slack-first workflow; one knowledge base powering both questionnaires and TC ensures consistency

<<>>■ Weaknesses<<<EB>>>

- 5-person team — limited capacity for enterprise support, custom implementations, and product velocity
- \ \$500k seed only — vulnerable to product stagnation or acqui-hire before reaching scale
- Trust Center feature depth appears basic relative to SafeBase — limited analytics, integrations, and access control sophistication
- Undisclosed pricing creates friction in structured procurement evaluations

Opportunities & Threats

■ Opportunities for Conveyor

<<>>1. Own the independent Trust Center category as SafeBase exits it.<<<EB>>>

SafeBase's acquisition by Drata means the category's original champion is no longer a neutral party. Customers who want a best-in-class standalone Trust Center without compliance automation are now genuinely underserved. Conveyor should explicitly position as "the Trust Center for companies that don't want to buy a compliance platform" — this framing is timely, defensible, and available.

<<>>2. Win on buyer experience, not just seller efficiency.<<<EB>>>

Every competitor focuses primarily on the security team's workflow. The buyer's experience inside the Trust Center — speed, clarity, self-serve access, and confidence in the answers — is underdeveloped across the board. Investing in buyer-side features (personalized recommendations, proactive document update notifications, buyer-side progress indicators) could define a new category standard.

<<>>3. Close the analytics gap to compete for SafeBase's disaffected customers.<<<EB>>>

SafeBase pioneered pipeline impact dashboards that connect TC activity to revenue outcomes. This is both a strong retention driver and a CFO-level ROI narrative. Closing this gap is a direct roadmap investment that would unlock a key win-back argument with former SafeBase customers now wondering about their Drata roadmap.

<<>>4. Mid-market gap left by bundled competitors.<<<EB>>>

Both Vanta and SafeBase/Drata require purchasing a broader compliance platform to unlock full Trust Center functionality. This leaves a clear mid-market opening for Conveyor as a standalone, full-featured Trust Center at a fraction of the total cost.

<<>>5. Transparent pricing as a demand generation asset.<<<EB>>>

Conveyor has a public pricing page. Every major competitor uses custom/opaque pricing. In an era of SaaS price sensitivity, this is both a demand generation asset and a positioning signal of mid-market accessibility.

■ Threats to Conveyor

<<>>1. Compliance platforms continue to bundle Trust Centers at lower friction.<<<EB>>>

As SOC 2 and ISO 27001 automation becomes the default for growth-stage SaaS, more companies will reach for their compliance platform's built-in Trust Center rather than purchasing a separate tool. Vanta Trust Center Essential and Drata Trust Center at low/no incremental cost represent real pull-through risk.

<<>>2. Wolfia's pricing model could force a market-wide reset.<<<EB>>>

If Wolfia raises meaningful funding and scales, unlimited-user pricing could reshape buyer expectations. Per-user or per-access pricing could become a purchasing friction point for Conveyor relative to Wolfia's flat-fee model.

<<>>3. Vanta's AI investment is accelerating.<<<EB>>>

Vanta's November 2025 "Agentic Trust Platform" launch and AI Agent 2.0 signal serious and ongoing AI investment. If Vanta narrows the Trust Center feature gap, the bundle value proposition strengthens. Medium-term threat, but the roadmap direction is clear.

<<>>4. SafeBase customer lock-in via Drata integration depth.<<<EB>>>

As SafeBase deepens integration with Drata's compliance data, existing Drata customers will have meaningful switching costs. This reduces the accessible TAM of reachable SafeBase users for Conveyor over time.

Competitive Monitoring Priorities

Given the pace of change in this market, monitor the following signals on a rolling quarterly basis:

- <<>>Wolfia funding:<<<EB>>> A Series A would signal they are scaling and should trigger an urgent pricing model reassessment at Conveyor.
 - <<>>Vanta Trust Center releases:<<<EB>>> Watch for any move toward standalone TC pricing or new buyer-experience features that reduce Conveyor's differentiation.
 - <<>>SafeBase/Drata roadmap:<<<EB>>> Track whether SafeBase maintains a distinct product identity or gets fully absorbed — the former sustains their competitive threat, the latter accelerates Conveyor's opportunity.
 - <<>>G2 review velocity:<<<EB>>> Track new reviews on all 5 competitors quarterly for emerging sentiment shifts, especially around AI quality, support, and pricing surprises.
 - <<>>OneTrust Trust Center investments:<<<EB>>> Low probability, but any move toward a standalone TC pricing tier would expand their ICP overlap and warrant a formal response.
-

<<<I>>>This brief was prepared in March 2026. The Trust Center market is evolving rapidly; AI capabilities and pricing in particular should be refreshed quarterly. Ratings and assessments reflect publicly available information, G2/Capterra customer reviews, and product documentation — they do not incorporate proprietary win/loss data or customer interviews.<<<E>>>
