

Trust Center Vision

Conveyor | End-State Vision & Areas of Focus

=====

Here is the result of "view" for the Page with URL <https://www.notion.so/2d1bc34a95a180ab9ec6e32bb384ca34> as of 2026-03-25T20:19:09.192Z:

■ Background

The Conveyor Trust Center is the primary customer-facing surface of our Trust product. As our customers' security review requirements grow more complex and their buyers more sophisticated, a consistent signal has emerged: the current TC experience isn't meeting the bar that customers (and increasingly, their sales and marketing teams) expect. This shows up both in how information is presented to Trust Seekers navigating a review, and in how much control TC Admins have to shape, customize, and maintain the experience.

Across multiple customer conversations (Qualtrics, Zapier, Exclaimer, and others), the same theme keeps surfacing: customers want a Trust Center that looks and feels like <<<I>>>their<<<E>>> product: polished, on-brand, and accessible to non-security audiences. At the same time, competitive pressure is intensifying. Competitors are shipping quickly, and we're receiving signals from key accounts (such as Notion) that they perceive Conveyor as not moving fast enough relative to the market.

Our north star for the Trust Center is:

<<<I>>>"Trust Center Visitors can confidently and efficiently complete their security review without support when using a Conveyor Trust Center."<<<E>>>

Getting there requires more than incremental improvements - it requires a clear, shared picture of what the TC should become across the full platform: visitor experience, admin and designer tooling, and integrations.

■ Project Overview

This initiative is about defining an ambitious, cohesive vision for what the Conveyor Trust Center should be by end of 2026 / early 2027 and creating organizational alignment around how we get there.

Rather than shipping isolated improvements without a shared destination, the approach is:

1. <<>>Define the end-state vision: <<<E>>>articulate what a best-in-class Conveyor Trust Center looks and feels like across the full platform
2. <<>>Decompose into shippable chunks:<<<E>>> break the vision down into features and improvements ordered by impact and customer need
3. <<>>Create a shared reference point:<<<E>>> so product, engineering, design, CS, sales and leadership can always see where we are today relative to where we're going, rather than wondering what the plan is

This is a living document. It will evolve as we learn, ship, and gather more signal but the intent is for it to serve as the definitive source of truth for TC direction.

■ North Star Goals

Areas of focus for this vision will keep in mind four primary outcomes, in alignment with Conveyor's broader company goals:

Goal

What it means

Trust Seekers can complete a security review — or get their questions answered — without the customer's security team needing to get involved. This is the TC's direct contribution to Conveyor's company-wide goal of 95% touchless reviews.

Trust Seekers leave the TC experience feeling confident they got what they needed, quickly and without friction.

Both Trust Seekers and TC Admins would recommend the Conveyor Trust Center experience.

A best-in-class TC experience becomes a meaningful driver of new logo acquisition and expansion revenue.

<<<I>>>As we release improvements based on the vision work, we will track improvements in these goal metrics with each release.<<<EI>>>

■ Areas of Focus

This section outlines the lenses through which we'll evaluate and shape the TC Vision. Together they form the evidence base for the decisions we'll make about where to invest, what to build, and how to sequence it.

■ Customer Feedback Themes

Across customer conversations, support signals, and account feedback, a consistent set of themes has emerged that the vision needs to address.

<<>>Design, branding, and customization<<<EB>>> is the loudest signal. Customers, particularly sales, CS, and marketing teams, want a Trust Center that looks and feels like <<<I>>>their<<<EI>>> product and brand. The ask is for deeper control over layout, visual design, content ordering, and branding beyond what the current designer tool allows. Multiple accounts (Qualtrics, Zapier, etc.) have raised this independently. The competitive bar they reference is typically ServiceNow or Harvey.ai clean, minimal, on-brand.

<<>>Accessibility for non-security audiences<<<EB>>> is closely related. Zapier explicitly described wanting their TC to be "enterprise ready" — meaning a visitor without a security background can understand what they're looking at and get what they need without friction. This is both a design and an information architecture problem.

<<>>Navigation and information findability<<<EB>>> is the core problem statement for this initiative. Visitors struggle to find the right documents, understand what's available, and efficiently complete their review. The current three-panel search experience has been called out as confusing.

<<>>Admin and designer tooling<<<EB>>> is a secondary but important theme. Admins want more control — staging environments to preview changes before going live, richer section and content management, and better bulk actions.

■ Competitive Analysis & Gaps

A full competitive brief covering SafeBase/Drata, Vanta, Wolfia, and OneTrust is linked in the Appendix. The headline findings most relevant to this vision:

<<>>Where competitors are ahead of us today:<<<EB>>>

- <<>>Pipeline impact analytics<<<EB>>> — SafeBase's strongest retention driver is dashboard tooling that links TC activity directly to revenue outcomes. Conveyor's analytics are good but not at parity with SafeBase here, and it's a real gap in enterprise conversations.
- <<>>CRM integration depth<<<EB>>> — Both SafeBase and Vanta have deeper bidirectional Salesforce/HubSpot integrations, including deal-stage TC access gating. This becomes material in larger deals.

- <<>>Access controls sophistication<<<EB>>> — SafeBase and Vanta offer more granular SCIM/SAML controls and full audit history. Relevant for enterprise customers with complex security review requirements.

<<>>Where the market is shifting:<<<EB>>>

- SafeBase's acquisition by Drata means the category pioneer is no longer a neutral, standalone player. Their roadmap is increasingly subordinated to Drata's compliance suite, creating a real opening for Conveyor to own the independent TC category.
- AI is now table stakes across all competitors. The new battlegrounds are <<>>UX, answer accuracy, citation transparency, and time-to-value<<<EB>>> — not whether AI exists.
- Wolfia's unlimited-user pricing model is an early signal that buyer expectations around per-seat pricing may shift. Worth monitoring.

■ **Feature & Functionality Gaps**

Beyond the competitive lens, this section catalogs specific features and capabilities that are either missing or underbuilt in the current TC, organized by platform area. These gaps were identified through customer feedback, competitive analysis, and internal product review. Each area represents an input into prioritization — not a committed roadmap.

<<>>TC Designer & Customization<<<EB>>>

This is the most frequently raised gap, and the one with the clearest customer signal. Customers — particularly their marketing teams — want deeper control over layout, visual design, and content structure than the current TC designer allows. Specific gaps include: flexible section reordering and layout editing, richer font/color/branding controls beyond logo and color palette, a staging or preview environment to review changes before publishing live, and page-level customization (different looks for different audience segments or products). The current designer is functional but limited, and competitors are raising the bar here.

<<>>Visitor Experience & Navigation<<<EB>>>

The three-panel navigation structure has been called out directly by customers as confusing, particularly for non-security visitors who don't know what they're looking for. Gaps include: a smarter, more guided entry experience that surfaces the most relevant content for the visitor's context, improved in-portal search with better ranking and filtering, proactive document recommendations based on visitor type or review stage, and clearer visual hierarchy so visitors can orient themselves quickly without prior knowledge of how a Trust Center is organized.

<<>>Document & Content Management<<<EB>>>

Admin-side document management has rough edges that create friction at scale. Gaps include: bulk document actions (tagging, moving, updating access in batches), better version management with clear replace/supersede workflows, improved document expiry and update reminders for admins, and richer organization options beyond flat folder structures — e.g., tagged views, filtered collections, or product-line groupings that surface the right docs for the right audiences.

<<>>Analytics & Reporting<<<EB>>>

This is Conveyor's most strategically significant gap relative to competitors. SafeBase has made pipeline impact dashboards their strongest retention driver — the ability to show a CFO that the Trust Center directly contributed to closed deals. Conveyor's analytics are solid at the visitor and document level but fall short on revenue attribution. Specific gaps: CRM-linked pipeline correlation (mapping TC access events to deal stages and outcomes), account-level engagement summaries for CS and AE use, ROI reporting that can be shared at QBRs or in renewal conversations, and historical trend views showing how TC adoption and engagement change over time.

<<>>Integrations<<<EB>>>

Conveyor has good baseline integrations but lacks the depth that matters most in enterprise deals. CRM integration gaps include: bidirectional deal-stage sync (gating TC access based on where a deal is in the pipeline, pushing TC engagement signals back to Salesforce/HubSpot), richer activity logging at the account and contact level, and deal-stage-triggered TC notifications. Beyond CRM, gaps include: deeper Slack integration for review request workflows (Wolfia's Slack-first approach is a notable contrast), compliance platform connections (pulling certifications and control evidence directly from Vanta, Drata, or Tugboat Logic rather than manual uploads), and DocuSign/Ironclad for NDA signing embedded in the TC access request flow.

<<>>Access Controls & NDA Flows<<<EB>>>

The current access model works well for common cases but has gaps in enterprise scenarios. Specific gaps: SCIM provisioning for SSO-based access management, full audit log history for compliance and legal review, more flexible NDA flow configuration (custom NDA templates per audience, conditional NDA requirements based on document tier), and the ability to grant time-limited or expiring access to specific documents or sections without revoking full TC access.

<<>>Multi-Product & Multi-Tenant Support<<<EB>>>

Customers with multiple products or business units want the ability to maintain distinct Trust Center experiences under one account — different branding, different document sets, different access controls — without creating entirely separate Conveyor accounts. SafeBase offers multi-product TC profiles as a differentiating feature. This is a gap that becomes more material as Conveyor moves upmarket into larger, more complex organizations.

■ *Where We Can Differentiate*

Feature parity with competitors is a floor, not a ceiling. The most important question for this vision is: <<>>where can Conveyor do something no one else has done?<<<EB>>>

A few areas stand out as genuine differentiation opportunities based on what we know today:

<<>>The buyer experience is the biggest white space in the market.<<<EB>>> Every competitor optimizes for the security team's workflow — the seller side of the review. The visitor's experience inside the Trust Center — speed, clarity, confidence, and ease — is consistently underdeveloped across the board. Conveyor's TC Agent is the clearest expression of this opportunity today, but there is significantly more to build around the buyer journey: personalized navigation, proactive document recommendations, review progress indicators, and more.

<<>>Independent Trust Center positioning is now a real differentiator.<<<EB>>> With SafeBase absorbed into Drata, Conveyor is uniquely positioned as a best-in-class, standalone Trust Center that doesn't require purchasing a compliance platform. For the large segment of customers who want TC-first (not compliance-first), this is a meaningful and available position to own.

<<>>AI citation transparency and answer quality<<<EB>>> — accuracy and explainability in AI-generated answers is an increasingly important trust signal. Conveyor already leads here and should treat this as a measurable product commitment, not just a marketing claim.

<<>>Helping TC Admins prove ROI<<<EB>>> — pipeline impact and revenue attribution are not just analytics features, they're the narrative that gets TC renewals approved and deals closed. No competitor has nailed this story end-to-end.

■ *Appendix*

■ ■ *Customer Insights*

Customization & look and feel feedback from customers. Pattern here is pretty consistent: customers want more control over layout, content ordering, and visual design polish and the ask keeps coming from marketing teams, not just security teams, which makes sense given it's a customer-facing page.

- Feedback from Qualtrics:
- Feedback from Exclaimer
- Feedback from Zapier
- Feedback from Sharefile
- OLD feedback from Sumologic
