

TrustUs League Q2 2026 Strategy

Conveyor | Objectives, Initiatives & Success Metrics

Here is the result of "view" for the Page with URL <https://www.notion.so/325bc34a95a181dba4aaebb23fe03f47> as of 2026-03-25T20:23:24.754Z:

This document provides an overview of the TrustUs League team's strategy, goals, and planned roadmap for Q2 2026, building on Q1 learnings and baselines. Q1 version can be referenced here

TLDR In Q2, TrustUs League is focused on turning Q1 groundwork into measurable outcomes. We have four goals:

- Improve TC Visitor CSAT from 3.3 → 4.0 by making self-service genuinely frictionless;
- Ship Trust Center 2.0 launching staging as the enabler, then delivering the first round of TC vision improvements;
- Shift the TC Agent from adoption to effectiveness, driving higher answer acceptance and fewer follow-ups; and
- Make Conveyor Trust Centers visible to AI so customers aren't left out as buyers shift to LLM-assisted vendor reviews.

All four goals roll up to the following company OKRs: 1 (Touchless Reviews), 4 (Trials + Onboarding), and 5 (Foundation for Growth)

Context

Company Goals

Company Vision: Instant trust between companies

Company Mission: Build the best Trust Automation for Top 5000 tech companies

For 2026, Conveyor's North Star metric is Touchless Rate - the % of security reviews completed end-to-end with zero human touches:

- Median ABX customers: ≥35% touchless by Q4
- Top 10 Strategic Accounts: ≥50% touchless by Q4
- Median Time-to-first touchless review: ≤30 days

Relevant company OKRs for TrustUs League:

- OKR 1 – Touchless Reviews: Make % Touchless Reviews the primary success metric and deliver a step-change in touchless outcomes for enterprise customers.
- OKR 4 – Trials + Onboarding: Compress onboarding so new enterprise customers see measurable touchless value in 30 days.
- OKR 5 – Foundation for Growth: Launch AI-to-AI trust network capabilities.

We would also expect an impact in OKR 3: Win ABX Customers as well as an improved look and feel and proven improvements in Touchless and visitor CSAT should lead to more deals but this should be a secondary impact and won't be our primary focus.

Tying it together:

TrustUs League owns the Trust Center experience that determines whether Trust Center Visitors can complete reviews without human intervention. Our work directly enables self-service adoption, trust in AI-driven answers,

and the reduction of manual follow-ups - all of which are prerequisites for achieving Conveyor's Touchless Rate goals <<<I>>>and<<<EI>>> will serve as differentiators in the market to help us close more deals

Key Q1 Learnings

- <<>>CSAT baseline established:<<<EB>>> Visitor satisfaction with "I can get what I need quickly and without friction from a Conveyor Trust Center" scored <<>>3.3<<<EB>>> — giving us a clear target to improve against in Q2.
- <<>>Agent adoption achieved:<<<EB>>> 56 Trust Centers now have the Agent enabled (Q1 goal was 50), and the Questionnaire Eliminator is being sunset. The foundation for quality improvements is in place.
- <<>>Visitor research completed:<<<EB>>> Customer interviews confirmed enthusiasm for a refreshed TC experience. Clean design, unified search, clearer navigation, and a changelog/announcements section all tested positively.
- <<>>Staging is a prerequisite:<<<EB>>> Big look-and-feel improvements to the Trust Center require staging so customers can preview and adopt changes safely. Staging must ship in Q2 to enable TC 2.0 rollout.
- <<>>Feedback collection is live:<<<EB>>> In-app and email visitor feedback mechanisms are now running (we currently have 17 customers with in-app feedback enabled (including Conveyor) giving us a continuous signal to measure against.

Market

Competitive analysis refresh: <mention-page url="https://www.notion.so/321bc34a95a1802885e8fce72bfce284"/>

Customer feedback from slack:

- Top competitors in the Trust Center space continue to add AI capabilities
- SafeBase's acquisition by Drata means Customers who want a best-in-class standalone Trust Center without compliance automation are now underserved. Conveyor can take advantage here
- Customer expectations are rising as AI-assisted vendor reviews become more common
- Buyers are increasingly using LLMs (e.g. ChatGPT) to research vendors. Trust Centers that aren't AI-readable risk losing visibility and falling behind their competitors

Target Customers & Problems

We continue to focus on the <<>>Trust Center Visitor<<<EB>>> as our primary target. Q1 gave us baselines and validated problems, Q2 is where we deliver measurable improvements.

<<>>Primary problem we are focused on this quarter<<<EB>>>

Trust Center Visitors today cannot quickly determine whether a vendor meets their requirements <<<I>>>with sufficient confidence and evidence<<<EI>>>, resulting in follow-up and additional effort. Our CSAT baseline of 3.3 confirms there is meaningful room to improve.

<<>>Role titles:<<<EB>>> GRC Analyst, Third-Party Risk Analyst, Security Assurance / Vendor Risk Analyst, Compliance Manager

<<>>Jobs to be done:<<<EB>>> Efficiently determine whether a vendor meets my organization's security, privacy, and compliance requirements without unnecessary back-and-forth.

<<>>What they need:<<<EB>>> Speed, clarity, confidence, and defensibility in every vendor review.

<<>>Pain points we're addressing in Q2:<<<EB>>>

- Cognitive overload from inconsistent Trust Center layouts and buried information → TC 2.0 redesign
- Back-and-forth due to unanswered questions → Agent quality improvements
- Trust Centers not visible to LLMs → TC searchable by AI

North Star & Hypotheses

Trust Center Visitors can confidently and efficiently complete their security review without support when using a Conveyor Trust Center.

Building on our Q1 hypotheses, in Q2 we are acting on what we've learned:

- <<>>Hypothesis 1:<<<EB>>> If Trust Center Visitors can ask their questions in natural language and receive cited, trustworthy answers, they will stop bypassing the Trust Center. <<<I>>>(Q2: Improve Agent speed, answer quality, and reliability)<<<EI>>>
- <<>>Hypothesis 2:<<<EB>>> If evidence and coverage are clearly surfaced and summarized across the Trust Center, Visitors will make decisions without follow-up. <<<I>>>(Q2: TC 2.0 first round of improvements)<<<EI>>>
- <<>>Hypothesis 3:<<<EB>>> If the Trust Center can provide answers along with a clear audit trail, users will trust automated information enough to rely on them for audits. <<<I>>>(Q2: Agent quality + TC 2.0)<<<EI>>>
- <<>>Hypothesis 4 (new):<<<EB>>> If Trust Center content is indexed and readable by public LLMs, our customers will maintain strong AI-assisted vendor perception as buyers shift to AI-driven reviews. <<<I>>>(Q2: TC searchable by AI)<<<EI>>>

Objectives & Success Metrics

KRs marked with \[TBD\] require baselining from Q1 data to set exact targets. Remaining targets should be finalized in early Q2.

TC Visitor CSAT improves: visitors can get what they need quickly and without friction

CSAT score for "I can get what I need quickly and without friction from a Conveyor Trust Center" improves by X%

Baseline: 3.3

X% of Trust Center sessions end without follow-up questions

Baseline: TBD from Q1 data

X% reduction in follow-up contacts from TC Visitors

Baseline: TBD from Q1 data

Trust Center 2.0: ship staging and deliver the first round of TC vision improvements

Staging capability shipped and available to all customers

Prerequisite for TC 2.0

Trust Center 2.0 first round of improvements shipped to GA

—

X% of customers adopt new TC version

Adoption within 3 months of launch

TC Agent shifts from adoption to effectiveness. Provides answers visitors trust and act on

Agent answer acceptance rate (thumbs up %) reaches X%

Baseline: TBD

X% of Agent interactions resolved without escalation or follow-up

Baseline: TBD

Trust Centers are visible and readable by AI
"TC searchable by AI" feature shipped to GA

—
X% of customers opted in
—

Success in Q2 looks like

- A Trust Center Visitor arrives at a Conveyor Trust Center and can orient themselves immediately. The layout is clean and intuitive (TC 2.0)
- They ask a question via the Agent and receive a cited, confident answer they trust enough to document in their review
- They leave without sending a follow-up email
- Admins can preview and roll out TC 2.0 changes safely via staging before going live
- Customers' Trust Centers are indexed and surfaced when buyers use LLMs to research vendors (this also facilitates

Initiatives

<<<I>>>Key initiatives for Q2 (to be detailed in Notion & Linear)<<<EI>>>

<<>>Staging<<<EB>>>

Ship staging capability to enable customers to preview Trust Center changes in a safe environment before publishing. This is the prerequisite for confident TC 2.0 adoption.

<<>>Trust Center 2.0 — First Round of Improvements<<<EB>>>

Deliver the first round of TC vision improvements: <<<I>>>still to be determined based on Vision work to kick off Q2<<<EI>>>

<<>>Agent Effectiveness<<<EB>>>

Improve the speed, quality, reliability, and configurability of the TC Agent: admin settings (custom disclaimers, key controls), and work toward higher answer acceptance rates and reduced follow-up rates.

<<>>TC Searchable by AI<<<EB>>>

Complete and ship the feature that allows public Trust Center content to be indexed by LLMs, ensuring customers maintain strong AI-assisted vendor perception.

Out of Scope

Item

Reasoning

Risk Notes

Full Trust Center rebuild / complete redesign

Q2 delivers the <<<I>>>first round<<<EI>>> of TC 2.0 improvements. A complete rebuild is a longer-horizon effort that will follow once TC 2.0 v1 is validated.

Risk of scope creep — clear communication needed on what constitutes "first round"

Net new admin-requested integrations

Focus remains on the Trust Seeker experience. Integration requests will be tracked but not prioritized this quarter.

May create friction with customers expecting integration updates

Agent localization

Deferred from Q1, remaining deferred. Priority is quality and configurability over language expansion.

May be a blocker for a small number of international customers

In-app Agent reporting/logging

Looker dashboards continue to serve this need. In-app reporting will be revisited as capacity enables us to address this.

Continued feedback from customers wanting this — monitor closely

Risks & Open Questions

- <<>>Design resource heavy projects<<<EB>>> stacked back to back at the beginning of the quarter (right after the above the fold work we are currently wrapping up) introduces additional complexity and risk here so scoping and sequencing is going to be extra important here!
- <<>>Staging vs. TC 2.0 sequencing:<<<EB>>> Big look-and-feel changes require staging for smooth customer adoption — if staging slips, TC 2.0 GA will be delayed.
- <<>>Scoping "first round" of TC 2.0:<<<EB>>> What's in vs. out of the first round of improvements needs to be clearly defined to prevent scope creep and set appropriate customer expectations.
- <<>>CSAT target of 4.0:<<<EB>>> We are targeting a meaningful improvement from 3.3. We should monitor whether the initiatives in Q2 are sufficient to drive this delta, or whether we need to adjust mid-quarter.
- <<>>Agent trust gap:<<<EB>>> Will visitors trust Agent answers enough to forgo follow-up, especially for high-stakes reviews? Q1 data on answer acceptance rates will be important here. Also, will enough customers trust this capability to enable it and provide data necessary for full success.
- <<>>TC searchable by AI → customer opt-in:<<<EB>>> Will customers be comfortable making their TC content public to LLMs? May require education and clear messaging.
- <<>>Measuring "session ends without follow-up":<<<EB>>> We need to define and instrument this metric. How do we determine the entire universe of customers that a Trust Center serves so we can fully understand what the denominator for "touchless" reviews is?
